Abstract

International Ranking of Sport Management Journals

The assessment of the overall quality of the sport management journals made remarkable
differences evident. According to the overall quality assessments, none of the journals received the
premium rating of A+. One journal is ranked as an A journal. Three journals are seen as B journals.
Four journals are identified as C journals, three as D and one as E. However, our research shows that
significant differences occur depending on the area of residence of the participants. Obviously, sport
management is a global business. National specifics may make certain journals more valuable for
domestic target groups.

Keywords: Sport Management, Journal Ranking, Evaluation
Approach

The evaluation procedure of this journal ranking is based on prior experiences of journal rankings in other fields of research. Both, a literature based analysis of journal quality as well as a pretest with different stakeholders was used to identify useful dimensions of quality. The following dimensions were part of the evaluation procedure: Frequency of reading the journal, relevance of publications in the journal to research in sports management, relevance of publications in the journal to practice in sports management, importance of publications in the journal for the academic career, scientific reputation of the journal in the field of sports management, overall quality of the journal.

The questionnaire contained further information about each participant's role in terms of position, area of interest, conference attendance, years of experience, and services provided for certain journals (e.g. reviewer, member of the editorial board).

The sample was drawn from sport management scientists and practitioners around the globe. Subjects qualified for participation based on their experience and work in the field of sport management. In total, 124 participants from 21 countries completed the online survey (response rate 11%) in 2006.
Results

The overall quality perceptions of all participants allow deriving the following international ranking of journals in the field of sport management.

<table>
<thead>
<tr>
<th>Journal</th>

</table>

The ranking shows that many journals in the field of sport management receive good feedback. Journals from North America (Journal of Sport Management), Australia (Sport Management Review), and Europe (European Sport Management Quarterly) are among the top journals.

However, a deeper dive into the evaluation by subgroups is necessary to understand the differences in perceived quality of certain journals across Europe, Asia Pacific, and North America.

The reported results are a first excerpt of selected outcomes from the field survey. Forthcoming is a full report of results including special analyses for different groups and regions.

Nota Bene:

Our special thanks go to the numerous supporters and participants of our research project all over the world. Without their input, this project would not have been possible, nor would the results provide any impact in our daily work in the field of sport management.

The results for three journals are nothing but indicative as they just came on the market at the time of the survey. These journals are marked (*).
